

What was good?

- Able to get production working for Individual Code reviews (Justin, James, Jacob, Blake, Danny)
- Meeting during scheduled lecture times to answer questions and work (Isabel, Naeun, Kayla)

What was bad?

- Time management with finals and other projects
 - I haven't finished all of my tasks (Naeun)
 - Exams took away time from tasks (Isabel)
- Merging feature branches into main (Justin, James, Jacob, Blake, Danny)

What needs to change?

- Use merge main into feature branch and use a pull request for feature branch into main
- Making time around Exams/Project/Presentation deadlines:
 - Be in constant communication with the team and those who have dependencies on other features
 - Dependent features should be first priority to complete
 - Manage and estimate capacity accurately to remain on task for the current Sprint
