User Manual
Community Board
James Austin Jr.

To use Community Board you don't have to be logged in to view post summaries. If you want to view post details you must log into a valid user account. When viewing the post details, you have the option to upvote the post, comment on the post, and upvote any comments. In the Main Feed (not on the '/#/' route) you have the option to select different communities and view those specific posts related to a community. In the community (not the Main Feed) you can create a post to that Feed, and the feed will refresh to show your new post. Currently each feed will present posts throughout the past week.

If you are not logged in you won't be able to interact with the post details if you manage to reach that route and be given an 'Unauthorized Request' error. If no posts were loaded then there will be a 'No Results Found'. Any failed requests will have the appropriate response message to vaguely describe the issue, at this time contact the system admins, this error is likely caused by the server.
