User Manual
Usage Analysis Dashboard
James Austin Jr.

To use Usage Analysis Dashboard you must be logged in as an authorized ADMIN user. To view the dashboard you must append the route /UsageAnalysisDashboard to the base URL (https://motomotoca.com/#/). You will be presented with 6 charts, 3 are bar charts and 3 are line charts. Bar charts: the VIew Display charts the top 5 most viewed Views of all time, the View Duration charts the top 5 most average duration viewed View of all time, and Feed charts the top 5 most posted communities of all time. Line charts: the Login Total charts the frequency of logins each day for the past 3 months, the Registration Total charts the frequency of registrations each day for the past 3 months, and the Event charts the frequency of future scheduled events. The view will refresh every 60 seconds with possibly new data.

These metrics are updated automatically when users navigate to a View, Login to their account, Register a new account, create a post in a Feed, or schedule an Event. The dashboard will be updated with these metrics.

If you are not logged in as an Admin you will be presented an alert for every component that attempted to load on the screen so you must click 'Ok' to exit those and you will be redirected to the Home Page.
